Essential Oils: Mother Nature's Most Powerful Medicine For Our Modern Day Plagues - Part 1

By Dr. Sabina DeVita

"Aromatic plants have been the object of respect and veneration among the majority of civilizations of the past." Dr. Daniel Penoel

Did you know............
- That 2% solution of Eucalyptus oil sprayed into the air will kill off 70% of air borne staphylococcus microorganisms?
- That 0.5% solution of Clove oil will destroy TB?
- That oregano oil is nature's most powerful E-coli killer?
- That essential oils are at least 50 times more therapeutically potent than herbs?

The use of essential oils is one of the most powerful, yet safe, healing modalities we have today. According to Dr. T. Friedman, "It should be considered much more in medical treatment and healing."

Where else can you acquire prevention, protection and recovery for ourselves, our animals, our environment, our water, earth and air all in one? The answers have always been provided for us by the wisdom of Mother Nature. Essential oils provide us with such abundant uses on all levels: physical, emotional, mental and spiritual

Brief History
The use of essential oils dates back to ancient Egypt, 4500 BC, and are considered to be the oldest known form of medicinals. The ancient Egyptians used essential oils (like myrrh and sandalwood oils) for purification and embalming their Pharaohs, to kill and inhibit bacteria and thus limit decomposition. Essential oils were considered more valuable than gold by ancient cultures, due to their phenomenal healing properties. When King Tut’s tomb was discovered in 1922, 350 litres of well-preserved oils were found in alabaster jars in excellent condition. Oils of Frankincense, Lotus Rose and Jasmine were found amongst the gold and silver, indicating their great worth to the Pharaohs.

During the great plague in Europe in 1413, a small band of thieves were captured in Marseilles, France, and charged with robbing the dead and dying victims of the plague. Although, the plague was highly contagious, not one of this morbid band of thieves ever contracted the dread plague.

The King, eager to protect himself and the Royal Family, demanded to know how the thieves had avoided the plague in exchange for their freedom. Coming from a long line of apothecary, the thieves were familiar with a combination of specific plant oils that when rubbed over the human body, would protect the body from contracting this most feared and deadly disease. They told of a special concoction of aromatic herbs, including cloves and rosemary, that they rubbed on their hands, ears and temples.

This “thieves oils” recipe can still be found in the Royal English archives and is the formulation for today’s Thieves Oil Blend by Young Living.

This is just one example of the many historical references that document the use of essential oils.

History further reveals that virtually the entire town of Buckleshurst, England was spared from the plague, even though nearby residents were dying in droves. This fortunate town was the center of the European lavender trade, making perfumes. But the oil of lavender has long been known for its powerful disease-fighting properties. Recent science has shown the immune-stimulating and anti-microbial properties that rival and even surpass many modern antiseptic chemicals and anti-biotic drugs.

A 17th century doctor from Verona, Italy, had such success warding off the plague using aromatic oils that the town erected a statue in his honor. Later in the 19th century, it is known that perfumery workers always

Essential Oils (Continued on page 1)

Changes of the Skin: Part 2
(Translated from The New Medicine)

By Ryke Geerd Hamer, MD

The Epidermis

The epidermis has a topside and an underside. With the underside it is bordering onto the corium. The topside, is what we can feel as the outer skin. This outer skin consists of pavement epithelium cells and gets directed from the sensory center of our cerebrum cortex.

Neurodermatitis

Through a conflict shock of being separated from a child or partner can we observe an ulcer in the skin, which we can mostly only recognize microscopically as such. But we can feel the rough skin, instead of being very smooth (anywhere on the body) This illness is also called neurodermatitis, (conflict active phase).

Exantheme / Eczema

In the healing phase, after the biological conflict is solved, the skin swells through the building of an edema, which we call exantheme. The ulcers fill itself slowly from the bottom up with new pavement epithelium cells.

Vitiligo (white patches on the skin)

The same procedure toward the outside can also be seen towards the inside, which means towards the leather skin. Should we see there an ulcer, meaning a lesion of the skin, than it impresses as always as a so-called vitiligo, as there the pigment containing pavement epithelium breaks down as invisible ulcers, reason for the white patches on the skin. Which means, we have a strong pigmented melanophage layer in the corium and a weak pigmented melanophage layer on the underside of the pavement epithelium.

The biological conflict of the vitiligo is always a brutal separation from a person with whom one had a very close emotional harmony or attachment, and than an ugly kind and way of separation. Example: When a young girl hears that her father had a motorcycle accident and his brain lay on the street. These two kinds of ulcers have always a biological separation conflict as the cause. A separation in the animal world has a very high ranking position. In the human brain, even it received one-fourth to one-fifth of our motoric space. Because it regulates the entire social behavior of the individuals among themselves. To be separated from a herd or as a child being separated from the mother, signifies quasi a sure death. Therefore an individual cannot, in principal, afford to make one single mistake in this area. The location of the ulcer is determined through the kind of conflict, respectively the content of the conflict. E.g. our infants, which are completely covered with clothing, react quasi all, with neurodermatitis on the checks, (when it comes to a biological separation conflict), because that is, where the contact to the mother breaks down.

Alopecia (hair loss)

The grandmother of a young person always patted her grandson on his head with her hand. When his very much loved grandmother suddenly, unexpectedly died, did he react with an alopecia areata, meaning, a round circled bold formation on the middle of his head. Only when he could solve the conflict, did the hair “sprout” back. The hair is in this case quasi a re-produced pavement epithelium of the skin.

Neurofibromatosis (Recklinghausen’s knots)

Aside from the separation conflict, we also have the opposite; the person who does not, - want-to-be-touched- We react then, with a so-called neurofibromatosis, meaning, a knot under the skin. No one yet knows for certain whether the formation is originally a pavement epithelium augmentation, or only a so-called Schwannoma, meaning, the sheath around the connective tissue of the...
A revolutionary new approach to immune function and disease treatment

Introduction to the immune system
Our health is directly influenced by our immune system. A balanced and healthy immune system is crucial for the body to defend against infections.

Today, however, many factors contribute to the general weakening of the body’s defenses. Antibiotics have begun to fail as the resistance of many infectious strains multiplies. Diseases spread more easily due to the failure of government control of health codes, deterioration of water quality, and frequent international travel.

Fortunately, recent research has uncovered a natural agent that can increase our ability to fight disease by strengthening our immune system. This natural agent is found in colostrum.

Colostrum is the first milk produced by mothers for their newborns (in fact, this is the case for all mammals). Initial immunity is established quickly if the baby is allowed to nurse. Babes who are not breast-fed consistently show a greater susceptibility to infections and allergies.

Transference of antibodies from the mother's colostrum to the baby’s immune system is a major reason colostrum is valued. Colostrum also contains large quantities of immunoglobulins (IgM), so the newborn is “immunosupervised” by the mother’s antibodies.

The Transfer Factors
Transfer factors are the most exciting health discovery in recent decades. Transfer factors are small immune messenger molecules that are produced by the larger organisms. Their role is to transfer immune recognition signals between immune cells and thereby assist in educating immune cells about a present or potential danger.

Colostrum is a rich source of transfer factors. The role of the transfer factors in colostrum is to help the baby’s immune system recognize hostile pathogens. Colostrum acts as a kind of “immunizing cocktail” for the newborn.

Most cow-milk allergies in humans are caused by the immunoglobulins found in colostrum. Transfer factors, on the other hand, are not allergic. What this means is that transfer factors produced by a cow are just as effective in humans as they would be in another cow. This is an exciting turn of events for medicine and prompted Dr. Vose to quote in his paper. Transfer Factor in the Era of AIDS: “Transfer factor [has] an important role to play in modern medicine which, from AIDS to Ebola, faces the emergence of new viruses or the reemergence of old pathogens such as tuberculosis.”

Further, it has been shown that transfer factors are equally effective whether administered by injection or taken orally. It has also been shown that a long-term oral administration of transfer factor preparations is safe. Infants and the elderly are the two groups especially at risk for infections. Oral administration of transfer factor is convenient and easily accepted by these age groups.

Transfer factors have been successfully used to treat the following types of diseases:

- Viral, fungal, neurological, parasitic, malignant diseases and autoimmune

Introducing 4Life Transfer Factor™
Transfer Factor™ is a revolutionary new approach to immune function and disease treatment. It is the most exciting discovery to come along in decades, a superior way to fight disease.

This remarkable “patented” process allows us to extract pure, concentrated factors from colostrum. Therefore, it has no allergic substance, no milk proteins or lactose. It would take 45 grams (or 80 capsules) of bowie colostrum to equal three capsules of Transfer Factor™

Transfer Factor™ is not a vitamin, mineral, herb, nor hormone. It is a sophisticated state-of-the-art way to protect ourselves and our families from the immune weakening effects of pollution, nutrient depletion, stress, overuse of drugs, bacterial, viral, parasitic and fungal strains that threaten us as we grow older.

This new product is the result of 50 years of research, costing US$40 million in discovery, 3,000 scientific papers have been written about it, and persons stores attest to its effectiveness. Transfer Factor™ poses no potential health hazards. It contains nothing toxic, foreign or counter productive.

Transfer Factor™ is for everyone. Our children need to be pre-armed and this new product is a beginning. We have developed a system that can be used as a weapon to help prevent the epidemic of disease that is rampant in our society.

Once in a while a product comes along that offers a major contribution to stimulating the immune system and is the answer to a natural shortcut to better health. This product is Transfer Factor™

Testimonials
Dawn has suffered from fibromyalgia and accompanying headaches for 17 years. Since taking a transfer factor, she had only had one headache.

Ruth was experiencing severe pain from a lower back fracture. Since using a transfer factor product, she does not need to take an anti-inflammatory with codeine.

Essential Oils Continued from page 3

showed an almost complete immunity during cholera outbreaks.

Dr. Jean Valnet, one of the world’s foremost authorities on the therapeutic uses of the oils, points out that the powerful, medicinal value of essential oils was known for centuries and were considered more valuable than gold and prized for healing and anointing.

Ancient scriptures are filled with references to aromatics – 188 references to oils are made in the Bible. Frankincense, myrrh, spikenard, and cassia are repeatedly mentioned throughout the Old and New Testaments used for anointing and healing of the sick. So modern research is now rediscovering this ancient first medicine with its powerful and immune-boosting properties.

What are “Essential Oils”?
Essential oils are the subtle, volatile liquids or essences from plants, shrubs, flowers, trees, roots, barks and seeds which carry the immune defense properties of plants. They are to plants what blood is to the human body and much more as the oils transport nutrients, amino acids, trace minerals, hormones, vitamin elements, oxygen and nurture the cells of all plants. They are literally the life force of the plant. There are now 30,000 known aromatic molecules that make up various essential oils and only a fraction has been analyzed and catalogued.

Next time... Essential Oils: A Modern Science Rediscovery?

Water continued from page 2

be inhaled and absorbed through the skin during a long hot shower as volatile organics can evaporate from the hot shower water. If we use a shower filter that contains a filtering media called KDF55, it will effectively remove chlorine and other contaminants including iron, arsenic, mercury, and hydrogen sulfide. It also effectively controls several types of bacteria, algae and fungi leaving you a much cleaner body and shower walls. As a bonus, the unsightly pink algae growth on the grouts will be gone and the tiles on the shower wall stay clean for a longer period of time.

You deserve a nice clean shower before you start your day or feel refreshed after a day of hard work or exercise.

Constance Lam, a pharmacist for over 24 years concludes that drugs never cure diseases. She is devoting her time to share with others how aromatic oils can be used for home redhead and healing via good and healthy food, improved lifestyle and other alternative and natural ways.
