GRAVIOLA

“Miracle tree from the Amazon found to be 10,000 times stronger than chemotherapy.” This was the headline from an article released by Health Sciences Institute, 1/1/2001 in their Members Alert. Health Science Institute is composed of a group of Doctors who scour the world to find cutting-edge treatments few people can access—or have even heard about. For the whole story visit: Health Science Institute website: www.hsibaltimore.com/ea2001/ea_010131.html

“ECG Graviola is harvested from its natural environment deep within the Amazon Rain Forest. Pawpaw shows promise in fighting drug-resistant tumors”. This was the headline from an article released from Purdue University. Purdue University researcher Jerry McLaughlin, working with doctoral student Nicholas Oberlies, found compounds in the Graviola tree that have shown preliminary success in fighting some drug-resistant cancers.

The studies, published in two separate journal articles, show that the Graviola compounds, also known as paw paw, are not only effective in killing tumors that have resistance to anti-cancer agents, but also seem to have a special affinity for such resistant cells. The findings were detailed in the journal Cancer Letters and the Journal of Medicinal Chemistry.

Graviola contains annonaceous acetogenins which have remarkable cytotoxic, anti-tumor activities. Their research identified more than 40 compounds with anti-cancer properties capable of killing cancer cells. One of the compounds bullatacin was reported to kill multi-resistant cells on human mammary cancer cells by inhibiting the production of ATP (adenosine triphosphate) which are energy-carrying molecules essential to all cell processes found in the cells of all living beings.

It is believed that about 2% minimum of cancer cells remain after chemotherapy. These cells can develop what is known as “the pump”. These cells become extremely resistant to further chemotherapy as they are able to pump out any attempt of chemo to enter the cell. These resistant cancer cells eventually grow to create drug resistant tumors. Graviola has been shown to cut off the energy supply to these resistant cells as well. Visit www.purdue.edu/UNS/html4ever/9709.McLaughlin.pawpaw.html For the study article see Purdue University Graviola Study below.

The HSI member’s alert informs that Graviola contains annonaceous acetogenins which have remarkable cytotoxic and anti-tumor activities effective against twelve types of cancer, including colon, breast, prostate, lung and pancreatic. Graviola, an all-natural product that doesn't cause extreme nausea, weight loss or hair loss, seems to selectively hunt down cancer cells, leaving healthy cells intact.
Excellent research conducted at Purdue University in West Lafayette Ind, a Health Science Institutes press release, the Skaggs Scientific Report from the Scripps Research Institute, and at Kaohsiung Medical University in Taiwan reports Graviola's cancer killing. In a study conducted in 1976 by the National Cancer Institute, the leaves and stem of Graviola showed active cytotoxicity against cancer cells.

PLANTS FROM THE AMAZON RAIN FOREST

Graviola has been used by local natives for chill, fever, flu, nervousness, palpitation, rash, sedative, skin disease, childbirth, nervousness, parturition sedative, diarrhea, dyspepsia, and gall-bladder and kidney problems for centuries.

The Amazon Rain Forest is the most bio-diverse area on earth with over 80,000 botanical species. Over forty percent of all medicines originate from plants found in the Amazon. In the good Lord's herbal pharmacy, there is a plant to normalize every disease that afflicts us. Medicinal plants contain 100s of compounds such as alkaloids, tannins, flavonoids, bitters etc. which all work in harmony to produce a healing effect without side effects. It is when Pharmaceutical Companies synthesize one or two compounds in order to obtain a patent, damaging side effects can occur.

ECG Graviola is carefully harvested from deep within the Amazonian Rain Forest by experienced harvesters, to bring you the utmost in quality. ECG Graviola only uses carefully selected leaves and stems. This pure leave powder offers the highest quality and potency. Pure leaf powder is green in color and is light weight by nature. Large capsules that state they contain pure leaf and stem powder yet weigh over 450mgs most likely do not only contain pure leaves and leaf stems. We recommend starting ECG Graviola with 1 to 2 caps 3x per day, gradually building up to 3 capsules 3x per day. For Graviola Liquid Extract, 20 to 40 drops 3x a day starting with 20 drops. Graviola is not recommended if you are pregnant. People with low blood pressure or on blood pressure medication should consult a physician before taking Graviola.

Testimonial:
I'm a 26 year-old mother of three children. One year ago, I was diagnosed with cervical cancer at Level 3 Stage 2. My treatment included two injections of freezing that were ineffective, two sessions of external radiation lasting six weeks each and two sessions of internal radiation using rods. During this time I kept losing weight, lost my appetite and was badly burned from the radiation. I ended up with kidney damage as well. When I went down to 80 pounds, they stopped the last sessions of radiation and cancelled the upcoming chemo. I could hardly get out of bed and spent all my time on the couch. My husband quit his job to look after me. I was off radiation for over a month when I began taking ECG Graviola. I have been on the ECG Graviola for three weeks now, I am up and about and my energy has improved dramatically. I can even go out shopping for an hour, got my appetite back and have gained ten pounds. I feel 100% better, I feel a lot less pain and sleep better since taking ECG Graviola. I'm most grateful for ECG Graviola!
Angie MacDonald, Lindsay ON

Other beneficial products to consider supplementing along with Graviola are: QSO2, premium echinacea, colloidal silver and premium goldenseal.
