The
Secrets of Oral Chelation
by Michele Payne-Salomon

Doctors Discover the Alarming Truth about Mercury’s and Other Toxic Heavy Metals’ Devastating Effects on Patients and the Secrets of Oral Chelation

Why is Oral Chelation still such a secret when so many doctors and health care professionals have been aware of its amazing benefits as far back as 1948? I have worked with hundreds of doctors and thousands of case studies that have used oral-chelating formulas for almost ten years and have experienced outstanding reversal of some of the numerous health issues caused by toxic heavy metals. These toxins are what we refer to as the twenty-first century plague.

What do 9/11 Ground Zero Rescue workers, one in 12 women of child-bearing age, people who consume fish daily, having amalgam fillings in their mouth, and vaccinated individuals all have in common?

1. After September 11th, ground-zero rescue workers and lower Manhattan residents were exposed to dangerous levels of mercury and lead, plus numerous other toxins, which caused respiratory and digestive problems, depression, lethargy, headaches, and elevated blood pressure.

2. The Centers for Disease Control and Prevention (CDC) states that “1 out of 12 women of child-bearing age already have levels of mercury that are close to hazardous; enough to cause ADD, lower IQs, plus other serious health issues in their unborn child.”

3. Consuming fish daily, having mercury amalgam fillings, and undergoing vaccinations each create severe health risk factors. The above all have a strong link to Alzheimer’s, Parkinson’s, cardiovascular degeneration, circulatory problems, memory loss, chronic fatigue, as well as autism, according to many experts.

In this day and age, it is generally impossible to not be exposed to toxic heavy metals; it becomes more a matter of how much and how often. Time after time, many of the aches and pains, even life-threatening conditions of your patients are due to common environmental exposures. Using a well-respected Oral Chelation formula, these health issues have the ability to improve if not be completely eliminated, sometimes in as little as six months.

What Is Oral Chelation Therapy?

Oral Chelation is a highly effective treatment for clearing toxic heavy metals trapped deep within the organs, tissues, and bones. Toxic chemicals and heavy metals can have a powerful impact on the human body. Oral Chelation is also valuable for the treatment of cardiovascular disease and circulatory problems, which have now been proven to be responses to heavy metal toxins; memory loss; increased allergic reactions; high blood pressure, cholesterol, and triglycerides. Autoimmune diseases and chronic fatigue syndrome also result from exposure to these twenty-first century pollutants. Shouldn’t everyone be offered a non-surgical therapy that could slow the process of atherosclerosis and restore healthy circulation?

Here are statements by professionals who understand the many benefits of Oral Chelation:

As an allopathic nutritional and metabolic physician, I am happy to state that Oral Chelation has served hundreds of my patients very well, indeed for many years now. Aluminum, mercury, and copper excesses/toxicities are quite common among my patient population in Tucson and phone-consulting patients around the US, causing fatigue, memory loss/dementia/early Alzheimer’s and general ill-health...The results, in hundreds of patients over a many year period, has been nothing short of outstanding, with total clearing of symptoms and very few sensitivities.

John V. Dommiss MD, MBChB, FRCP(C), ACAM member john@johndonimisseMD.com

After using Oral Chelation for six years, I recently had a complete physical check-up. Inland Cardiology Clinic, Post Falls, Idaho did the work-up, which included an EKG and scan of my heart and arteries. The heart specialist said he found I had the “heart of a young man and arteries as clean as a new whistle,” and I’m decidedly older than a younger man!

John Coleman, PhD, world-renowned author, has books published in eight languages. John was the first U.S. authority to report the Avian Flu outbreak in 1984.
Over the past five years, I have actively encouraged my patients to participate in IV and Oral Chelation therapy. IV Chelation is a valid form of heavy metal detox, however, many of our patients do not have time to accomplish 30 or more three-hour visits, and some are intimidated by the delivery system. The Oral Chelation patients are dosing daily without side effects and exhibiting many of the same desired benefits as the IV patients. One patient shared recently that he now takes long walks and even climbs stairs. For this patient, walking to the mailbox was impossibility prior to his utilizing our Oral Chelation protocol. We prescribe Oral Chelation to all patients as an integral part of a healthy lifestyle.

Woodie Fritz, MD, The Fritz Clinic, wfritz@fritzclinic.com

I have been practicing general dentistry for many years in my community and have become increasingly concerned with the potential negative effects that mercury and other toxic heavy metals can have on the health of my patients. The benefits of Oral Chelation came to my attention shortly after recommending it to one of my patients. A long-term dental patient had developed Alzheimer’s two years prior. Approximately one month after beginning the Oral Chelation formula, his combativeness had improved considerably, reported to me by his family and other providers.

Robert Nelson, DDS, Saginaw, Michigan, 989-799-6790

As CEO of Extended Health, I detailed the overlaps between symptoms of autism/ADD and those of mercury toxicity in a 2001 report featured in the Townsend Letter:

[Treated a] 13-year-old boy diagnosed with ADD. Excellent results reducing arsenic, lead, and cadmium in a two-month period using only Oral Chelation.

J. Brighton, MA, ND

ADD + AUTISM: Maile Poul, PhD, Director of Research of Extended Health, Walnut Creek, California (maile@ExtendedHealth.com), conducted case studies on 12 children, ages ranging from three to nine years, all with verified toxic heavy metals. “The children had behavior and immune system compromises. In the majority of these individuals, we have evaluated heavy metals toxicity, we had them on a six-month protocol of an Oral Chelation AM/PM Formula. The abnormal levels of all the major heavy metals had either been eliminated or significantly reduced. However, we have found that in some cases the heavy metals can be stored deep in the brain and nerve ganglions and take longer to remove. As these heavy metals are mobilized from the deeper tissues, the hair analysis reading will actually appear higher for a short period of time indicating that these deeper deposits that have been stored are being mobilized and excreted. The remaining mobilized heavy metals will continue to be excreted out of ones system as long as the individual continues to remain on the Oral Chelation Formula. In some cases a one-year protocol is needed for these deeper deposits.

One example was a seven-year-old autistic girl with very poor cognitive function and memory. She had a difficult time following directions, and could not speak in sentences. Her immune system was compromised and her chronic coughing was severe. Her bowel movements were irregular with an extremely bad odor, and she had much bloating, stomach upsets, and gas. Her energy was poor and did not sleep well. Her hair analyses revealed sever mercury toxicity. After six months on the Oral Chelation Formula, her hair test levels of mercury went normal. Her cognitive abilities improved; she became a good reader; her short-term memory improved; her short-term memory improved; she had more imaginary play; she followed directions better; and she could speak in full sentences. Her bowel movements are regular with no fowl odor, bloating, or gas. Needless to say her family is extremely pleased.

There are many different methods of testing for toxic heavy metals. The following excerpts describe a few methods.

TOXIC METALS + AUTISM: Roy Kupshinel, MD, of Oviedo, Florida (Rkupsinel@aol.com) reports: I have had a very significant reduction in my own toxic metals as documented by a hair analysis. I have been taking an Oral Chelation AM/PM Formula without the added intravenous EDTA chelation. One of my autistic patients, who is five years old, has also documented reduction in toxic metals by the hair testing method and has experienced a remarkable improvement over the past year. Observations by his parents and teachers, along with testing at school, document his improvements.

COST-EFFECTIVE: Dawn Ewing, PhD, ND, Executive Director International Academy of Biological Dentistry & Medicine, author of Let the Tooth Be Known, Are Your Teeth Making You Sick?, Houston, Texas (drdawn@drdawn.net) uses a biological terrain assessment and meridian stress assessment to verify the absolutely fabulous results with patients using oral chelation for removal of toxic metals, chemicals, and build-up in the arteries. It is cost-effective and can be used as a person’s basic vitamins.

CIRCULATION: Nancy Gardner-Haven, PhD, at the California Preventive Medicine Non-Profit Foundation in San Rafael, California (drdawn@yahoo.com) conducted a thermological study on eight individuals with varying and complicated heart conditions. After six months on an Oral Chelation AM/PM Formula, all but one person had an improvement of at least 20% increase in circulation, reducing the level of stenosis of the vascular system. Thermology testing has been used as an early detection of heart disease.
Oral Chelation

Generally speaking, heavy metals disrupt metabolic function. They accumulate and thereby disrupt function in vital organs and glands such as the heart, brain, kidneys, bone, liver, etc. High blood pressure and cholesterol are common issues with the majority of patients. The patients normally do not stop taking their medications. As they begin improving from the Oral Chelation formula, reduction or elimination of the medication is common.

HEART: James Miles, ND of Georgetown, Texas (512-868-9867). A patient's cholesterol was tested on June 19, 2001, the total cholesterol was 269, and the LDL was 177, the triglycerides 215, and the HDL 49; the risk was 5.4. On 7/12/2001, he started on an Oral Chelation AM/PM Formula. When retested on 9/17/2001, his total cholesterol was 184, the triglycerides was 67, and the LDL was 123; the risk factor was 3.83. Amazing results in just two months! Testing mythology by blood.

Toxic heavy metals can also increase the acidity in the blood, and, as a protective measure, the body will leech metabolic minerals and then calcium from the bones to help restore proper blood pH. Oxidative stress and acidosis lead to inflammation in arteries and tissues, causing more calcium to be drawn to those areas as a buffer. The calcium coats the inflamed areas in the blood vessels like a bandage, patching up one problem but creating another, namely, hardening of the artery walls and progressive blockage of the arteries.

CONSUMER: Wayne works as an auto machinist. He is around auto racing fuel, which contains a lot of lead. His feet and toes tingle and are often numb. Wayne experiences chronic fatigue, irritability, and sleeping problems. Wayne began by ordering a hair analysis to verify numerous high level toxins.

Wayne is feeling improvements with more energy and is now able to resume working 15-hour days. The joints in his body do not hurt as much, and his lower back stiffness and pain are gone. Wayne also states that he no longer feels fatigued and he is sleeping better. Original testing verified toxic heavy metal levels of the following: Cadmium - High, Copper - High, Tin - High, Lead - High, and Cobalt - Medium.

United States military veterans have numerous health issues and need special attention.

VIETNAM VETERAN: After two weeks on Oral Chelation, I have noticed great improvements. The rash – doctors have said was shingles, ringworm, parasites, fungus, etc. – is disappearing. I am a veteran and have been having problems with this for 15 years. I have noticed a change in mental attitude and in my physical well-being, thanks to the Oral Chelation.

T. Batt

According to the Environmental Protection Agency (EPA), there are 50 different industries that expose individuals to dangerous toxic heavy metals on a daily bases. Your patients cannot stop working. Some quality Oral Chelation formulas can be used long-term to ward off the daily exposure along with reducing the body load.

N. Bragger

Exposure to your daily environment has a huge impact on your health.

PARKINSON-LIKE TREMORS: For the past few years, I have had an increase in tremors of my hands. I could not hold a glass of water in my left hand with out significant tremors. I have been on Oral Chelation now for two-and-a-half months. I have noticed a considerable drop in the tremors to the point that the only time I notice them is when I am extremely tired or stressed, and even then, they are minor. I live in an area of constant exposure to toxic heavy metals in the air from mining and factories.

D. Trudeau, NMD

My patient suffered from chronic fatigue with recurrent sore throats and headaches. Her symptoms have improved from a level 4 out of 10 to an 8 after just a few months. We will continue to use Oral Chelation as she continues to improve. She is happier, enjoying life and her increased energy.

Dr. D. Ryan

Toxic heavy metals contribute to so many different health issues and symptoms. The numerous benefits of Oral Chelation are powerful.

Are All Oral Chelation Formulas the Same?

No, of course not. It is extremely important to learn how to compare Oral Chelation formulas to determine which ones have the most effective results. If I can be of any assistance in this education process, please do not hesitate to contact me directly.
